TEKNOGEAR BY [TECNO2](http://www.tecno2.it)

Cambio elettronico al volante

TeknoGear is an electronic sequential gearbox behind the wheel for **racing cars** and cars of various types.

It consists of a complete kit that can be applied to any engine and any type of sequential gearbox.

The kit Includes the linkage, the transmission control system with "cut off" and put in neutral, integrated battery support, a standard battery pack, the actuator and the complete wiring.

The total weight varies from 4 to 6 Kg depending on configuration and is completely waterproof, with certification IP68.

Paddles are usually made of carbon, can be mounted on any type of wheel and can be adjusted to guarantee the maximum comfort in driving and performance.

The wiring is resistant up to 600° C and is made from silicone quenchable auto-with a great resistance to high mechanical stress.

This electronic shifting system is particularly suitable as an upgrade the sequential gearbox of **Rally** cars, like S1600, S2000 and Wrc cars.

With this system you can significantly improve the performance of the car without compromising reliability, enabling you to gain valuable hundredths every time you change gear.

TeknoGear is a true sequential gearbox **kart** steering wheel, ... fast, safe and reliable. TeknoGear technology is covered by patents and technique is a small

masterpiece, easily applicable on any chassis and engine, completely waterproof and with a total weight between 2.5 Kg and 4 Kg. The wiring is clad entirely in a self-extinguishing silicone sheath resistant up to 600° C and resistant to high mechanical friction.

TeknoGear was born from the experience gained in the auto industry and is a concentrate of technology that transmits emotions from F1. The versatility of TeknoGear is one of its strengths. This shifter, in its smaller form, apply also on motorbikes and on all cars with engine motorcycle-derived.
